

21 Finds Your Card

Effect: Reveal the chosen card out of 21 randomly selected cards.

Method

- Get any random 21 cards from a 52 card pack (with or with out jokers)
- Fan out the 21 cards and get someone to pick a card only with their eyes make sure they don't tell you
- Once chosen lay the cards 3 across and 7 down (their card is in the fourth position)
- Ask them which column their card is in e.g. the first
- When they say which column their card is in push that pile together
- Make sure the pile their card is in is always in the middle
- Do this for 3 times
- Count eleven cards and the eleventh one is theirs (do the counting in your head!!)
- On the third time the pile that their card is in put that pile in the middle with the other two piles(one on top one on bottom)
- Count to eleven and put them on the table and say "is that your card"

For a more freaky affect do step 10 with your eyes closed!!

This is a famous trick.
